COVAX_{on} Functionality Changes - Latest Release (March 31st)

Please see the functionality changes that were made for this release summarized below. This is a high-level summary of the changes. Users are recommended to refer to the latest versions of the **role-specific job aids** that will be provided, which incorporate the latest functionalities and step-by-step instructions.

Please refer to the sections applicable to your role:

Section 1: Clinical Flow Section 2: Inventory Management

Section 1: Clinical Flow

- 1. Simplified Vaccination Flow introduced
- 2. Client Status bar has been updated to reflect "New, In-progress, Completed" stages
- 3. Client's age calculated from DoB and displayed on the client record
- 4. Users alerted when attempting to administer a second dose before the minimum interval
- 5. Duplicate client record report developed
- 6. "Inactive" clients are unable to be checked-in or receive a dose
- 7. Congregate Living institutions are available to select from client record

1. Simplified Vaccination Flow introduced

- A new functionality has been developed to offer a more efficient clinical flow process containing the check-in, vaccination and check out steps in one screen. This is to accommodate the scenario whereby one User is performing all the clinical flow steps, such as in the case of historical data entry.
- This flow should not be used in settings whereby different Users are performing each stage of the client's vaccination (check in, vaccine administration, and check out). The simplified flow can be accessed by Site Super User and Vaccinator profiles.
- A new job aid has been developed to outline the full clinical flow leveraging this new functionality; **"Simplified Vaccination Flow Job Aid"**. This job aid has been made available to the Site Leads for dissemination to all Users.

2. Client Status bar has been updated to reflect "New, In Progress, Completed" stages

The client header has been updated to reflect 3 distinct stages: *New, In-Progress and Completed*. Regardless of if the client is in dose 1 or dose 2, the dose administration workflow reflects the corresponding stage the client is in. The stage represents the client's journey from arrival to having had all their required doses. The status is more detailed and represents the dose administration of the client. Incorporating "stages" has solved for the scenario where a client is receiving a vaccine that only requires a single dose. In this case, the client will receive 1 dose and the stage will reflect "completed" after being checked out of dose 1. The product information at the top of the screen indicates whether the product is a single dose or multi-dose product.

Stage: Ne	Stage: New (Client has not had any doses administered)									
Person Account Harry Potter							Launch Simplified Flow	Check-In	Administer Dose	•
Age 48 Years 6 Month(s)	Client Status New	Product Name Pfizer	Product Type Double Dose	Total Valid Dose O	Total Other Doses 2					
	New				In Progress		Completed			

Stage: In-	Progress (C	Client has	s had at le	east 1 dos	e)		
Person Account Harry Potter		NY 1677-773 NY				Launch Simplified Flow Check	-In Administer Dose 🔻
Age 48 Years 6 Month(s)	Client Status Dose 1 checked out	Product Name Pfizer	Product Type Double Dose	Total Valid Dose 1	Total Other Doses 2		
	~			In P	rogress	Completed	
Stage: Co	mpleted (C	lient has	received	l and bee	n checked o	out of all doses in the series	3)
Person Account Harry Potter						Launch Simplified Flow Chec	-In Administer Dose 🔻
Age (A Vears & Month(s)	Client Status	Product Name Pfizer	Product Type Double Dose	Total Valid Dose 2	Total Other Doses		

Note:

- The client status functionality has not been changed and continues to be updated based on the clinical flow. The introduction of the stage is an added layer of information. Any client lists or reports that were previously including the client status continue to contain that information.
- Historical client records will not immediately reflect the appropriate stage. However, if any
 update is saved to the client record, it will trigger the record to update to the appropriate
 stage. For example, a client that has been checked out from dose 1 will not show any stage.
 However, after modifying anything on the record, such as checking them in for dose 2, the
 stage will automatically update to "In Progress". Also, the product name and product type from
 their first dose will not be reflected in the header until an update is made to the record.
- If a client has received dose 1 of a multi dose product and the client is then marked "inactive", the client will remain in the "In Progress" stage under Dose 1 Checked out status.
- If the dose admin record is cancelled, the status will be impacted, which as result will modify the Stage. For example:
 - o If the client is reverted to "New" status, it will change the stage to "New"
 - If the client is reverted to "Dose 1 Checked Out" status, it will change the stage to "In Progress"

3. Client's age calculated from DoB and displayed on the client record

COVax_{ON} now calculates the client's age based on the Date of Birth that has been input on the client record. Client age information will be displayed next to the birth date on the client record header.

Person Acco Ryan Gol	unt Id				
Birthdate	Age	Gender	Home Phone	Email	Stage
1949-03-09	72 Years 0 Month(s)	Female	(416) 694-8464	testmoh12@mailinator.com	In Progress

The client's age will also be visible from the client list view on the Vaccination Event page and the "Showing Clients for Vaccination Event" report.

4. Users alerted when attempting to administer a second dose before the minimum interval

Prior to administering a client's second dose, vaccine administrators are provided information on the client's first dose, including the number of days that have elapsed between doses. If vaccine administrators attempt to administer a client's second dose before the minimum required interval for the product, they will receive an alert. Vaccine administrators should read the alert but are not prevented from continuing with dose administration. Note: this alert only arises in the regular flow (not the simplified flow).

	Check-In	
	Minimum Interval Alert: For the PFIZER-BIONTECH COVID-19 mRNA PB vaccine, the minimum interval is 19 day	rs from the previous dose.
		Previous
num pr	oduct intervals:	

Minim

- Pfizer = at least 19 days from the previous dose
- Moderna = at least 21 days from the previous dose
- COVISHIELD = at least 28 days from the previous dose

5. Duplicate client record report developed

Two reports were developed to identify potential duplicate clients in COVax_{ON} to assist Site Super Users in resolving duplicate client records. The reports will display the client characteristics and the duplicate record item name allowing the user to proceed to manage the duplicates and leverage the client merge functionality. Please see the Edit Dose Admin & Merge Duplicate Clients job aid for more details about resolving duplicates.

- 1. Go to the reports tab, select "All Folders" and select "Duplicate Management"
- Open the "Dedupe clients filtered by User AO" report to see a list of duplicate clients only at your Authorized Organization

		Report: Duplica Dedupe cli	ted Clients ents filtered b	y User AO

- 2. Select the "Duplicate Record Item Name" on the right column for the client
- 3. Select the "Duplicate Record Set" hyperlink from the Duplicate Record Item

4. Select the "Related" tab of the Duplicate Record Set. This will show both client records that are linked as duplicates. Right click on the Client Name hyperlinks to open them into a separate browser. Review both records to determine next steps and if a client merge should be performed.

6. "Inactive" clients are unable to be checked-in or receive a dose

In both the standardized client flow and the simplified client flow, clients who are "inactive" are unable to be checked in or receive a vaccine. If a user attempts to check in or administer a dose to a client that is in the status "inactive" an error message will pop-up stating, "*The client should be 'Active'* to proceed". The user must then remove the 'inactive' checkmark, and they will be able to proceed.

	Check-In	
The client should be 'Active' to proceed.		,
		Finish

Note: inactive clients are filtered out of the client search from the Simplified Flow within the Vaccination Event record. If the client is not appearing when searching from the Simplified Flow, search the client from the "Client Search" tab and uncheck the "Inactive" checkbox to allow them to be searchable and proceed through the flow. For example, if the client moved out of province after having had their first dose and then returned and requires their second dose.

7. Congregate Living institutions are available to select from client record

Congregate Living facilities have been established in COVax as "Institutions" and are available on the client record to search and select from the "Institution" field.

Reason for Immunization	Congregate Living: Staff	/
Institution	360KIDS SUPPORT SERVICES - Hamilton Hall [NS000404]	

The below table summarizes the types of Congregate Living Institutions:

Congregate Living Institution Types						
MMAH funded Supportive Housing						
Developmental services / Intervenor						
Emergency Homeless Shelters						
Mental Health and Addictions Supportive Housing						
Homes for Special Care						
Adult Correctional Facilities						
VAW and AHT Shelters						
Children's Residential Facilities						
Youth Justice Facilities						
Indigenous Health and Wellness Strategy Residences						
Bail Beds & Indigenous Bail Beds						

Section 2: Inventory Management

- 1. Temperature label on Shipment record has been updated
- 2. Users able to select multiple reasons for damaged doses from shipments
- 3. New fields on Shipment record have become mandatory
- 4. Event Inventory related list view updated
- 5. Informational tooltips added to the fields on the inventory record
- 6. Pfizer product naming convention has been updated
- 7. New Janssen product available

1. Temperature label on Shipment record has been updated

The Temperature field label on the shipment record has been updated to "Temperature Reading (°C)"

2. Users able to select multiple reasons for damaged doses from shipments

From the Shipment record, users can now select more than one reason for damage. This would be used in scenarios when there are multiple reasons for damage (i.e. if some doses were expired and some doses had a cold chain incident). Users can use the arrows to toggle items between the "Available" and "Chosen" columns, and more than 2 items can be selected.

Damaged Quantity	
Reason	
Available	Chosen
DP-Damaged Prod	* •
EX - Expired Product	
CCE - Cold Chain I	•
CCH Cald Chain I	•

3. New fields on the Shipment record have become mandatory

The following fields on the shipment record are required for the user to successfully save the record. An asterisk has been added to indicate to the user that the below fields are mandatory*. If the user tries to save the record with any of the below information missing, COVax_{ON} will return an error (see below)

New Shipment Authorized Organization* Information Product* • Shipment ID Status Ŧ Quantity Received* Requisition ID Q • * Product Q Total Shipped Quantity* Ø We hit a snag. E) DP.Da Review the following fields <u>Authorized Organization</u> C CCE - Cold Chain Inci. Product CI Total Shipped Quantity Quantity Received Save & New Save

4. Event Inventory related list view updated

The Vaccine Event inventory "Status" field name was changed to "VEI Status". In addition, the VEI Status of the Vaccination Event Inventory record (Active or Inactive) will be visible when users select "View All" Vaccination Event Inventories from the Authorized Organization inventory record.

PFIZER-BION	VIECH COVID-19 MRNA 0.3 MI - BN123	4, 2021-03-31		. 1
Related Detail	s

Vaccination Event	Lakeridge PHU, Lakeridge Health Oshawa, Oshawa	VEI Status	Active	
Inventory Type	Vaccine	Inventory Product	Pfizer Vaccine	
Doses Wasted		Inventory Status	Available	
Allocated Doses		No Consent for Data Collection Doses		
		Extra Doses From Vial		
Created By	📇 abby graham, 2021-03-09, 5:05 p.m.	Last Modified By	abby graham, 2021-03-09, 5:05 p.m.	

-	VEI Status	\sim
	Active	

It is important to keep in mind that if a Vaccine Event Inventory should not be made available for selection from the VE, the Inventory Manager/Super User can change the status of the Vaccine Event Inventory to "Inactive". Any Vaccine Event Inventory in status "Inactive" cannot be selected for administration by the Vaccinators. Also, if the Vaccine Event Inventory is from an AO inventory that is not in status "Available", it can also not be selected for administration.

5. Informational tooltips added to the fields on the inventory record

Within the inventory record, certain fields now have tooltip pop-ups added so users can better understand the calculations and definitions of each field:

Received doses	Doses Available	Adjustment Quantity
Received doses from shipment or from transfer Received Doses 1	Calculation: Total Doses - (Administered Doses + Doses Pending + No Consent for Data Collection Doses + Total Wasted Doses + Doses Wasted due to Excursion + Doses Recalled) Doses Available 1 10	Only to be used when received doses are entered incorrectly and to update Total doses to reflect physical quantity on hand. Doses should be en- tered currentiatively (eg. if previous value-4, and current value -2, Adj qty should be-6). Users should enter Adjustment Reason and Adjustment Notes if the quantity is entered. Adjustment Quantity
No Consent for Data Collection Doses	Extra Doses from Vial	
Doses should be entered cumulatively. (e.g if original value for no consent for data doses=2, next day's value is 3, therefore 5 should be en- tered on the field) No Co., ent for Data Collection Doses 1	Doses should be entered cumulatively. (e.g if original value for extra doses=3, next day's value is 4, therefore 7 should be entered on the field) Extra Doses from Vial (1	

6. Pfizer product naming convention has been updated

The Pfizer Vaccine product name has been altered to follow the below naming convention and the route of administration was updated to "Intramuscular: IM". The historical records have been updated based on this naming convention.

• Product name: PFIZER-BIONTECH COVID-19 mRNA PB
